West Jakarta, Jakarta, Indonesia

Informatics Engineering graduate with 3+ years of enterprise-level experience in software quality assurance and performance testing at PT. Bank Mandiri Tbk. Brings strong technical depth across the full testing spectrum — from performance scripting with Apache JMeter and LoadRunner, to end-to-end manual testing, log tracing with Kibana & Elastic Stack, SQL data validation, and Jenkins pipeline automation. Experienced in cross-functional collaboration with development and DevOps teams, with hands-on development skills in Java (Spring Boot), JavaScript (React, React Native), and RESTful API design.

Experience

PT. Bank Mandiri Tbk.
Performance Test Engineer
February 2023 – Present

- Designed and executed automated performance test scripts using Apache JMeter and LoadRunner Enterprise for Kopra by Mandiri, simulating high-traffic scenarios to validate system stability.
- Performed end-to-end manual and regression testing across complete application flows to validate functionality and ensure stability after each deployment.
- Traced request/response flows end-to-end using Kibana and Elastic Stack to support root cause analysis and developer troubleshooting.
- Monitored real-time server metrics during load tests, identified bottlenecks, and delivered optimization recommendations based on response time, throughput, error rate, and SLA compliance targets.
- Conducted API testing via Postman and executed SQL queries against staging and production databases to validate data integrity and detect integration issues early.
- Automated test job scheduling and execution via Jenkins batch pipelines, ensuring consistent and repeatable test runs across environments.
- Built internal tooling for the Kopra team using JavaScript/Node.js and Angular — including an auto-indexing utility, form-based tools for text encoding and data processing, a bulk ZIP export tool, a dynamic test data generator for single-use data needs, and a lightweight Express.js proxy service that exposes database queries via simple HTTP GET endpoints.
- Collaborated with cross-functional teams — including developers, DevOps, and infrastructure — to define test objectives, coordinate environment setup, and manage defect reporting via Jira.

PT. Enigma Cipta Humanika
Full Stack Developer Trainee
Intensive Bootcamp — Backend (Java/Spring Boot), Frontend (React), Mobile (React Native)
November 2022 – January 2023

- Built production-ready backend services using Spring Boot (Java) with RESTful API architecture, integrated with PostgreSQL as the primary relational database.
- Developed responsive web interfaces and mobile application screens using React and React Native.
- Delivered a complete end-to-end capstone application as part of a cross-functional team, covering the full development lifecycle from design to deployment.
- Applied Git-based version control, code review practices, and Agile-style collaboration throughout the project.

PT Mejakita Edunusa Mandiri
Back-End Developer Intern
February 2021 – April 2021

- Developed RESTful APIs using CodeIgniter 4 to support web application requirements, with MySQL for database design and management.
- Collaborated with the frontend team to ensure seamless client-server data integration and delivered complete API documentation to accelerate developer onboarding.
- Performed local API testing, identified bugs, and optimized performance based on test results and team feedback.

Education

Universitas Negeri Malang
Bachelor of Informatics Engineering
2018 - 2022
GPA: 3.81

Technical Skills

Languages	Java, PHP, JavaScript
Frameworks	CodeIgniter, Spring Boot, React, React Native, Angular, Flutter
Testing Tools	LoadRunner Enterprise, JMeter, Postman
Databases	PostgreSQL, MySQL
Observability	Kibana, Elastic Stack
CI/CD & Tools	Jenkins, Git, Jira, Figma
